

8th Maternal Medicine Course

The Medicine of Pregnancy

13 & 14 June 2019, Thursday & Friday

8.00am to 5.30pm | Academia, Level 1, Auditorium

20 College Road, Singapore 169856 (Located in SGH Campus)

INTRODUCTION

Maternal Medicine, also known as Obstetric Medicine, is a very important part of obstetric and general medicine practice. It covers the medical complications and conditions occurring in pregnancy. A significant proportion of maternal morbidity and mortality has one or more underlying medical conditions, and in developed countries medical disorders such as cardiac disease have emerged to become leading causes of maternal mortality.

Women with pre-existing medical conditions often have concerns on how the condition affects their babies and pregnancy and vice versa, and a major clinical challenge we face is managing and counselling these mothers. This challenge is not unique to obstetricians, but also applies to physicians and general practitioners who look after women with medical issues who may be pregnant, or are contemplating pregnancy. Indeed, women's healthcare in pregnancy, in this era of multidisciplinary and multi-professional care, is relevant to all healthcare disciplines including anesthesia, pharmacy, nursing and midwifery.

This will be our 8th course in Maternal Medicine. We have 3 international faculty in addition to our local experts contributing to an exciting scientific programme featuring the latest evidence based management of medical disorders in pregnancy. Interactive case studies and discussions, which have enjoyed much positive feedback in previous courses, will continue to be part of the course.

"It gives me great pleasure to announce that ISOM will again be the nominal sponsor of the 8th Maternal Medicine Conference to be held on 13th to 14th June, 2019 at the Academia Center.

I had the good fortune to attend this course myself as an invited speaker in 2015 and I was thoroughly impressed with the high quality of the educational content, conference facilities and staff who manage the conference. I can guarantee that all attendees will leave the conference feeling invigorated and stimulated by learning from the panel of local and international speakers most of whom are world-leading experts in their respective fields."

*Kenneth K Chen, MD
President of ISOM
Brown University, USA*

COURSE OBJECTIVES

- Mastering the essentials of common and important medical problems in pregnancy
- Keeping current with controversies in management of diabetes in pregnancy
- Counselling mothers with medical conditions
- Understanding common misconceptions with radiology and imaging for the pregnant woman
- Key take home messages from panel discussion of real life challenging obstetric medicine cases with interactive participation from the audience.
